COMP3320 / COMP6325

Cyber Security Management in Practice

Assignment 1

AI Use for Data Breach Analysis

Student name: _____

Student ID: _____

Unit: COMP3320 / COMP6325

Session: Semester 2, 2026

Due: 2355, Sunday 13/09/2026 (end of Week 7)

Word count (excluding references and appendices): _____

Contents

Contents 2
AI engines selected 3
Organisations selected 3
Part 1 – Information Gathering ....**Error! Bookmark not defined.**
Part 2 – Analysis 4
Organisation 1 – [Organisation name] 4
Organisation 2 – [Organisation name] 4
Organisation 3 – [Organisation name] 4
Organisation 4 – [Organisation name] 4
Organisation 5 – [Organisation name] 4
Part 3 – Summary 5

Appendices 7

AI engines selected

Define the two AI engines you selected and your criteria for choosing them.

AI Engine 1: _____

AI Engine 2: _____

Selection criteria: [Explain your criteria.]

Organisations selected

List the five organisations analysed. Each must be a real Australian organisation breached itself (not a third party), with the initial breach occurring in Australia between 1 January 2026 and 30 June 2026.

Organisation 1: _____

Organisation 2: _____

Organisation 3: _____

Organisation 4: _____

Organisation 5: _____

Analysis Per Organisation

Estimated effort to complete: 30 hours. Complete Steps 4 and 5 for each organisation, then write a 500-word (±10%) summary per organisation of the analysis undertaken in Steps 4/5 (2500 words ±10% in total).

Organisation 1 – [Organisation name]

Analysis of AI responses

1. For each run for each organisation, check each reference supplied by AI and confirm if it is relevant and accurate.
2. For each organisation, are the two responses from the same AI engine consistent and if not, where do they vary?
3. If the responses from the same AI engine vary:
    - identify which, if any, of the areas of variance is correct and provide your own reference to support this.
    - if AI is guessing/lying, provide your opinion as to why this is happening.

[Write your analysis here.]

Comparison between the two AI engines

- are the responses consistent between the AI engines and if not, in what areas do they vary?
- are the responses providing the same quantified values and the same references?
- if there are differences, quantify the differences and provide your opinion about why the two different AI engines are providing different responses.

[Write your analysis here.]

Organisation 2 – [Organisation name]

[Write your analysis here.]

Organisation 3 – [Organisation name]

[Write your analysis here.]

Organisation 4 – [Organisation name]

[Write your analysis here.]

Organisation 5 – [Organisation name]

[Write your analysis here.]

Part 3 – Analysis Summary

Estimated effort to complete: 8 hours. 1000 words (±10%) summarising your opinion of the value of using AI to analyse and report on Australian data breaches.

[Write your summary here.]

References

List all sources you cited to verify AI responses and support your analysis. Do not count toward the word count.

Appendices

Include all 20 raw AI responses (5 organisations × 2 AI engines × 2 runs). Head each "Organisation XXX, AI Engine YYY, Run n". Do not count toward the word count.
